

ZAP THEN ZIP

ZAP THE CHARGE OUT OF YOUR
BATTERIES THEN **ZIP** THEM INTO A PLASTIC BAG
FOR **ZILCH** EFFECT ON THE PLANET →

FOLLOW THESE FOUR EASY STEPS TO SAFELY RECYCLE YOUR HOUSEHOLD BATTERIES AND CELL PHONES:

[1] GATHER YOUR HOUSEHOLD BATTERIES

This includes all single-use, rechargeable, button cell and 9-volt batteries. You can also recycle your old cell phones.

[2] DISCHARGE BATTERIES

Soak the batteries in an open-topped container in a solution of three tablespoons of baking soda to a quart of water for 24 hours to make them safe for recycling. This is a critical step since even partially charged batteries are highly dangerous!

[3] PLACE IN PLASTIC BAG

Put discharged batteries and cell phones into a clear plastic zip-type bag. Don't forget to tape your button batteries, wrap your cell phones in paper, and seal it up.

[4] LEAVE IT ON YOUR RECYCLING BIN

Place the sealed bag on top of your mixed paper recycling bin and set it out on your collection day. We'll make sure your batteries and cell phones are properly, and safely recycled.
